

## **Nigeria at 58 and NAP's Cockroaches & Rats**

Nigeria at 23: The NAP (National Advance Party, 6th registered Nigerian political party that joined the existing 5 political parties in 1983 Nigeria presidential election) presidential candidate Tunji Braithwaite focused on eradicating cockroaches and rats in the country. At the end of '83 election, no single state believed their rodents reached alarming level.

Today, 35 years after, the country is acutely infested with advanced breed of cockroaches and rats in terms of resistant and audacity of living in the land openly instead of in the darkness of kitchen's cupboard and latrines.

In the 90s, the late legal luminary Gani Fawehinmi (SAM & SAN) kept shouting that stick and carrot approach won't eradicate our cockroaches and rats. The sage called for stick and sharpest sword.

Today at 58, very strange strain-type-of termites have been cloned by our cockroaches and rats, and the three are devouring our blessed country, Nigeria. We all know the mechanism of termites devouring their prey can only be synonymous to the green snake under the green grass. Dangerous!

Today, for the sake of our children's future; shame and agony of having to depend on foreign aids to augment our real budget, let every Nigerian particularly the Civil Servants rededicated to monitoring and combating cockroaches, rats and termites above, below, behind and within his/her "sit". Then Prominent Emirs, Obas, Church Owners, Muslim Spiritual Heads and NLC confront cockroaches. It is then prayer warriors, abounds on the land can perform miracle. Never the other way.
